

The General Manager

Flinders Island Council

To whom:

DA2023/028 – Residential Badger Corner – Requirement on all Residential Applications

The Council is in the process of putting in a Waste Management Process for the Islands. The best way forward is to have all residential applications have in place as part of their application a household waste management system. The System should identify

- How the building's kitchen will deal with
 - compost material
 - recyclable materials and
 - non-recyclable materials
- How and where the property will store its compost system and separated waste.

I ask that Council consider this for this application and any future building applications.

To aid applicants a selection of examples can be presented.

Yours faithfully
